

**TASK 3 – Built-in functions: Number formatting and random numbers****TASK 3.1**

Write **program code** that uses a HLL built-in function to format a real number as currency by applying the following features:

- a leading currency character, such as \$
- comma separators for thousands
- rounding to a defined number of decimal places
- padding with leading and/or trailing zeros

**Key focus:****HLL built-in functions****TASK 3.2**

Write **program code** for a procedure to generate a random number within a given range.

Use built-in features of the HLL to avoid repeating the same sequence of random numbers.
